They turn to the experts at Hazleton Imaging Center, where we offer a specialized ultrasound process that can closely monitor the blood flowing through your veins and arteries.

Called “vascular ultrasound” because the medical term “vascular” refers to your body’s entire blood-carrying system, this process is a digital imaging procedure that clearly shows how your body’s veins and arteries are working and whether blood is flowing properly through them.

Fred Sadak, RT (R) (N) RDMS – OB/GYN – ABD – Breast RVT, a well-respected technologist in the Hazleton area, has joined our staff. He has been performing these procedures for over 25 years. We are fortunate to have someone of Fred’s caliber on staff at Hazleton Imaging because he takes the time to listen to patients and is attentive to all aspects of patient care.
